

# Automate Your Third-Party Software Update Processes

Easy2Patch ensures that third-party products on computers within the IT infrastructure are updated centrally, from the correct source, and at the right time.

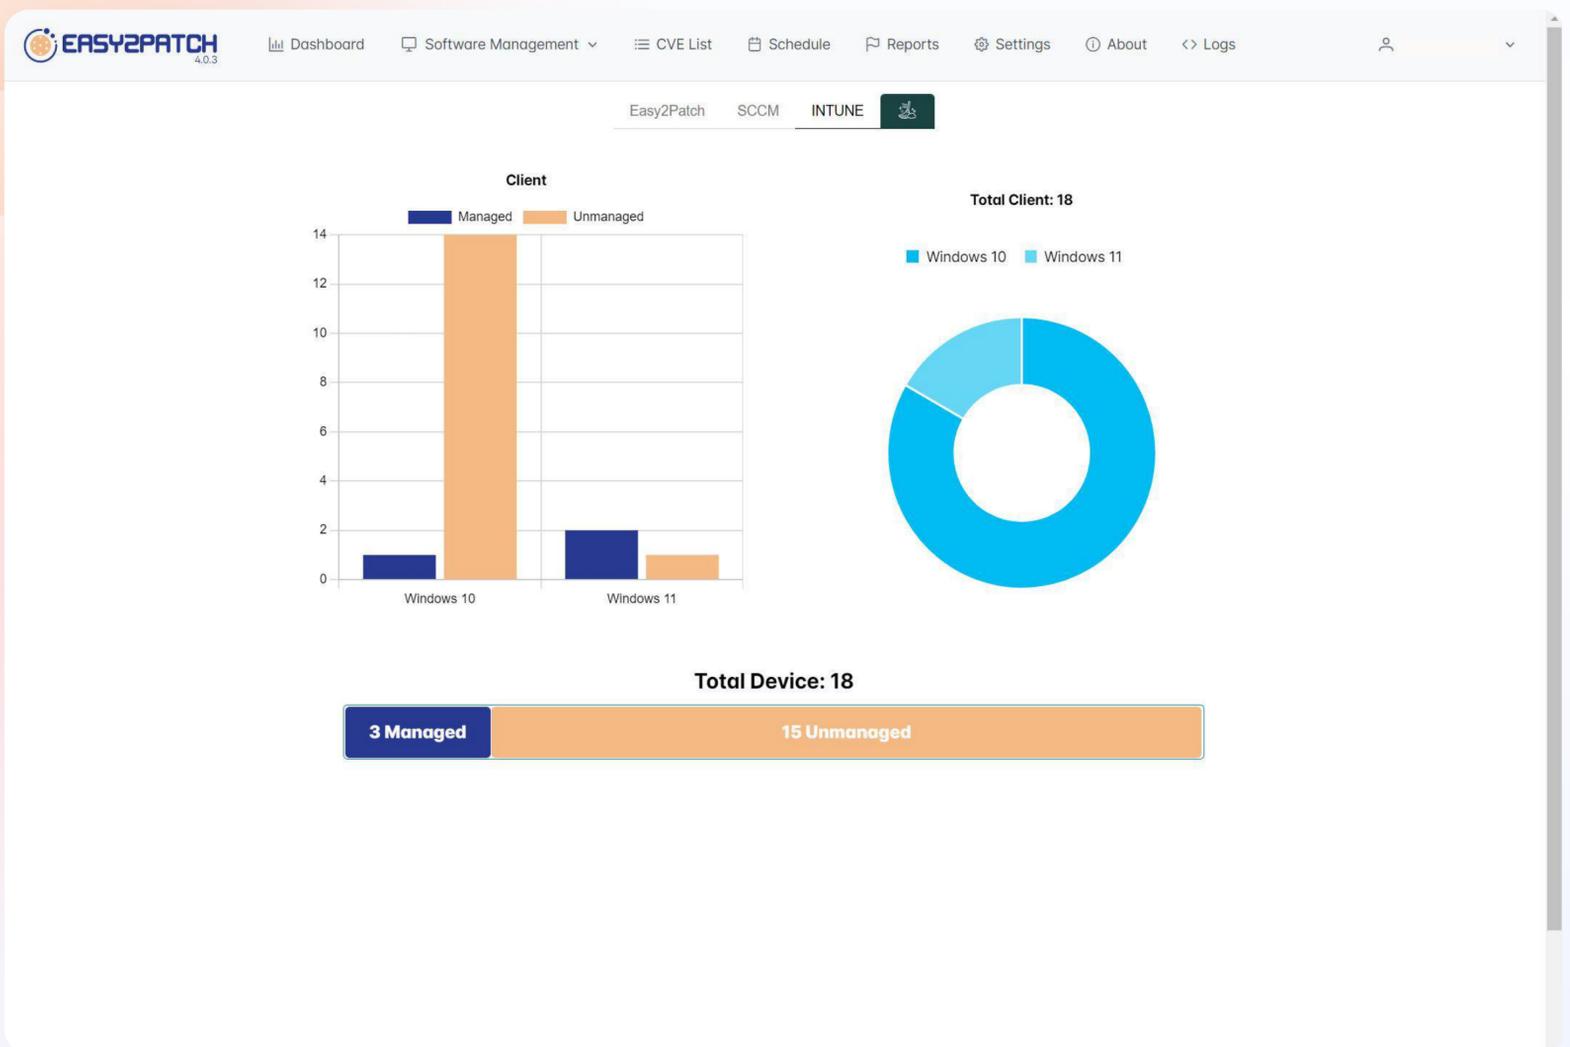

Easy2Patch integrates with WSUS, ConfigMgr, and Intune, covering third-party application updates on Windows operating system platforms. Third-party product updates are securely provided through the original site connections.

With Defender integration, Easy2Patch automatically sends third-party updates with a specific CVE score that has not been deployed yet.
